## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments with respect to claims 1- 46 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Berg (5,999,911) into view of Shandony (6,675,261).

Berg et al (5,999,911) taught the invention as claimed (e.g., as in exemplary claim 1) identity system for defining a workflow for managing entity identities, comprising the steps of:

- a) the identity system accessing a template (Figure 8, element 230);
- b) creating a definition of a first workflow based on the template (Figure 8, element 252);
- c) storing the definition of the workflow (Figure 8, element 258). Berg teaches the management of workflow as disclosed, but does not disclose the managing the entity identities as in amended claims. However, Shandony teaches identity system which incorporates certificate management into the workflow process so that different standards for certificate management can be applied among various entities, see col.

55, lines 9-25. Therefore, it would have been obvious to one of the ordinary skill in the art at the time of invention to combine, Shandony for managing entity identities into the system of Berg et al, because it will provide for establishing different sets of criteria for different level of entity identities.

Regarding to dependent claims 2-21, 23-32, and 34-45, such as for example, for step of accessing, creating and storing is access with integrated system, are all obvious variations of the well-known workflow management techniques. For example, the abstract of Berg et al at the end states that the workflow and its related data are accessible to multiple users. Furthermore, applicant is claiming managing the workflow through parameters because of the template being an XML document. It would have been obvious to one of ordinary skill in the network workflow management art at the time of the invention that implementing well known workflow management in XML structure would be an obvious variation of the well-known workflow management.

### ***Conclusion***

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
